Summary

Backend Java Engineer building scalable, high-throughput banking microservices for 28M+ users. Experienced in event-driven architecture, distributed systems, caching, observability and performance optimization using Spring Boot, Kafka and Redis.

Skills

Languages: Java 8/17/21, SQL

Backend: Spring Boot, Hibernate, REST APIs, Microservices, Distributed Systems

Architecture: Domain-Driven Design, Event-Driven Systems, API Gateway, Scalability, Fault Tolerance

Data/Streaming: Kafka, Redis, Oracle SQL, Message Streaming

DevOps/Tools: Docker, CI/CD, Maven, Git, Jira, Postman

Testing/Security: Unit Testing, Integration Testing, JUnit, JWT, Swagger/OpenAPI

Observability: Logging, Monitoring, Metrics, Production Debugging

Experience

Java Developer — Tata Consultancy Services

Jun 2023 – Present

ICICI iMobile Banking Platform (28M+ Users)

- Designed scalable Spring Boot microservices supporting high-throughput banking workflows using Kafka message streaming.
- Built MPIN validation service using Redis write-through caching and SHA-256 encryption reducing latency by 50%.
- Developed secure REST APIs handling sensitive user data with authentication, encryption and performance optimization.
- Implemented Checker-Maker workflow using custom SQL improving operational governance and concurrency handling.
- Built CIBIL microservice integrating TransUnion APIs with stream-based payload optimization.
- Created reusable FSL Middleware SDK improving developer productivity across 250+ engineers.
- Performed code reviews, production monitoring, incident debugging and reliability improvements.

Technical Highlights

- Designed distributed microservice architecture using Domain-Driven Design and API Gateway patterns.
- Executed asynchronous processing pipelines, caching strategies and fault-tolerant service design.
- Built internal developer tooling improving onboarding and service consistency.
- Focused on scalability, performance tuning, observability and production reliability.

Projects

Food Delivery Event-Driven Microservices Platform

- Designed event-driven message streaming pipeline using Kafka for order workflows.
- Applied Redis caching, event processing and retry strategies.
- Applied resilience patterns using Resilience4j.
- Implemented structured logging, correlation IDs and monitoring metrics.

JSON-to-YAML Maven Automation Tool

- Automated JSON to Swagger YAML transformation improving API documentation workflows.
- Published reusable Maven package enhancing developer productivity.

Education

B.Tech in Civil Engineering— Vishwakarma Institute of Technology, Pune

2019 – 2023

CGPA: 9.01
